

# Privileged Elevation Tool for IBM i

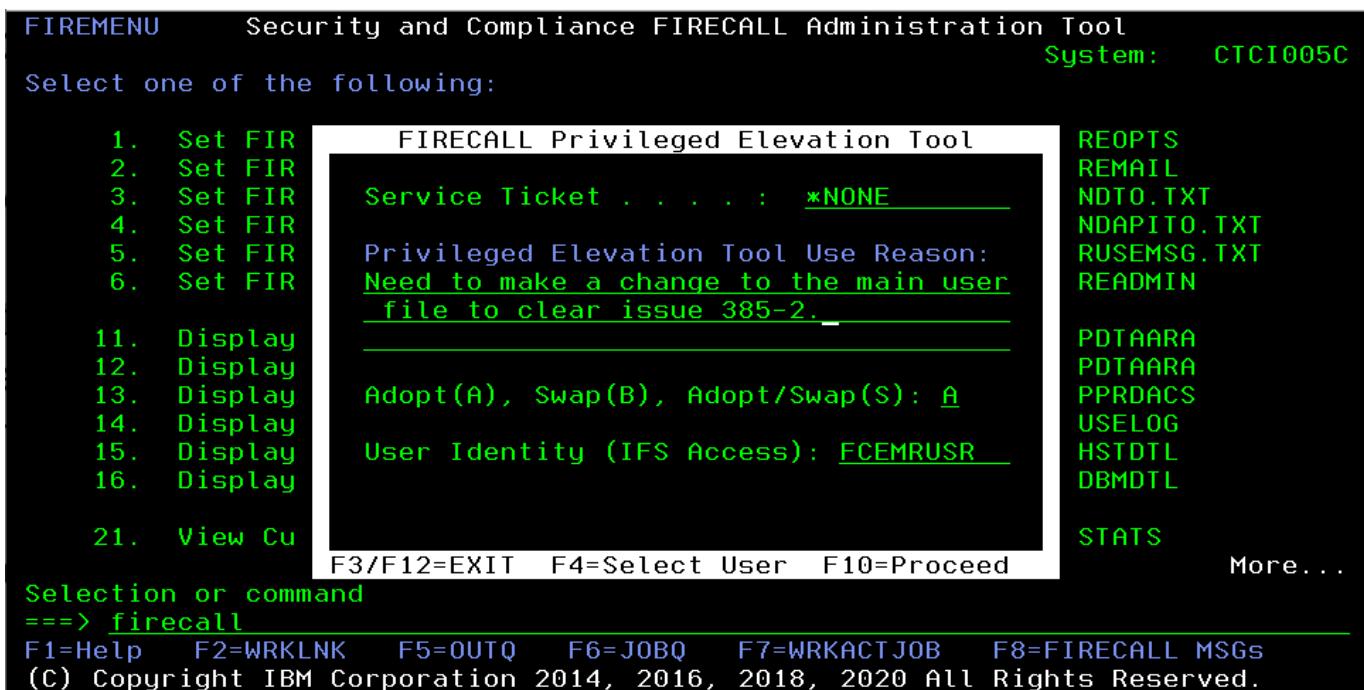

Reduce privileged users while allowing just in time access as needed

IBM Technology Expert Labs Power Delivery Practice is proud to provide the Privileged Elevation Tool for IBM i (Fire Call). Without careful control, privileged users can pose a risk to your system security. This tool enables the security administrator to reduce privileged accounts, with a mechanism to temporarily elevate privileges to users when needed.

Privileged Elevation Tool for IBM i is fully auditable and provides notifications when invoked. This allows compliance to industry guidelines on privileged users.

## Privileged Elevation Tool

When installed and configured, this tool allows only pre-authorized users to adopt or swap a pre-defined list of user profiles. These profiles can be used to give help desk support agents higher access to an application or make changes at a system level. The authority granted is up to the administrator of the tool. And while elevated, all actions (commands and SQL) are recorded and logged. These logs can also optionally be emailed to an administrator to verify that the actions taken while in an elevated state were appropriate for that particular user within their role. This tool is the perfect jump start to reduce your privileged user count while temporarily providing the rights needed.

## **Implementation Services**

Need help securing your IBM i system? Our Expert Labs team is highly trained in the proper way to handle complex security configurations. We can guide you all the way from design to implementation. You don't have to undertake security yourself – allow IBM Expert Labs to be your trusted consultants to ensure a successful project!

## **Statement of Good Security Practices**

IT system security involves protecting systems and information through prevention, detection and response to improper access from within and outside your enterprise. Improper access can result in information being altered, destroyed, misappropriated or misused or can result in damage to or misuse of your systems, including for use in attacks on others. No IT system or product should be considered completely secure and no single product, service or security measure can be completely effective in preventing improper use or access. IBM systems, products and services are designed to be part of a lawful, comprehensive security approach, which will necessarily involve additional operational procedures, and may require other systems, products or services to be most effective. IBM DOES NOT WARRANT THAT ANY SYSTEMS, PRODUCTS OR SERVICES ARE IMMUNE FROM, OR WILL MAKE YOUR ENTERPRISE IMMUNE FROM, THE MALICIOUS OR ILLEGAL CONDUCT OF ANY PARTY.
